# MULTIPLE HIGH DOSE MDMA PILLS

DETECTED 6 DECEMBER 2024

## LIGHT BLUE PILL: LOUIS VUITTON PRESS

TOTAL WEIGHT OF PILL 299MG  
MDMA PURITY 59% (176MG FREE BASE)

DETECTED 12 DECEMBER 2024

## RED PILL: ANARCHY PRESS

TOTAL WEIGHT OF PILL 441MG  
MDMA PURITY 37% (163MG FREE BASE)

A common dose of MDMA is between 80-120mg. This means the amount of MDMA in these pills is significantly more than the amount a person may usually expect to take. These pills were each brought separately to CanTEST for testing. The amount of MDMA in every tablet and capsule may vary a lot, even if they are from the same batch, supplier or source.

**Effects and signs of an MDMA overdose** can include signs of serotonin toxicity, like confusion, agitation, overheating, seizures, fits, fast/irregular heart rhythm, muscle tension, uncontrolled movements (e.g. shaking foot/leg, wobbling eyes) nausea/vomiting, loss of consciousness.

The health risk is greatly increased if high amounts (including multiple doses) are consumed over an extended period of time (a day/night). Some interactions with other stimulants and medications can increase the risk. **Serotonin toxicity can be fatal.**

# REDUCE THE HARM

(Naloxone can reverse an unexpected opioid overdose)

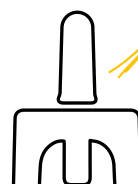

START LOW,  
GO SLOW

TEST IT BEFORE  
YOU TAKE IT

STAY HYDRATED  
& KEEP COOL

CARRY  
NALOXONE
